

**ANOTHER  
REASON WHY YOU  
DON'T GOLF IN  
450°C  
WEATHER.**

Graphite oxidizes at high temps. So gaskets made with graphite deteriorate as well. Thermiculite<sup>®</sup>, the revolutionary sealing material from Flexitallic, maintains its integrity up to 982°C. Preventing leakage and the loss of bolt load that can be so costly—and ultimately dangerous. Replace your graphite gaskets. It will cut your handicap.
