

*Flexitallic*<sup>®</sup>

YOUR GLOBAL GASKET PROVIDER

**AFTER  
450°C  
IT'S ADVANTAGE  
THERMICULITE<sup>®</sup>.**

Graphite oxidizes at high temps.

So gaskets and packing made with graphite deteriorate as well. Thermiculite<sup>®</sup>, the revolutionary sealing material from Flexitallic maintains its integrity up to 1000°C.

Preventing the loss of bolt load or permeability that can be so costly—and ultimately dangerous.

Replace your graphite gaskets and packing material.

Because when the heats on, graphite can't serve.
